December 3, 1993

FCC ANNOUNCES THE INTERFERENCE IMPROVEMENT FACTORS FOR STATIONS WHICH HAVE PETITIONED TO MIGRATE TO THE EXPANDED BROADCAST BAND

In Report and Order, MM Docket 87-267, Review of the Technical Assignment Criteria for the AM Broadcast Service, 6 FCC Rcd 6273 (1991) ("R&O") the Commission's stated goal "[w]as to facilitate an overall improvement and revitalization of the AM broadcast band and to effectuate the necessary incorporation of new AM spectrum between 1605 and 1705 kHz into the existing AM band (535 to 1605 kHz)." The Commission concluded "[t]hat the public interest would be best served by using the expanded band to improve the overall quality of the AM service by lessening interference and congestion in the existing band." As the basis for selecting those to migrate to the expanded band, the Commission established three categories of stations and defined an interference improvement factor to be used to rank eligible migrators within each category. Category one stations are those few stations that are eligible to take advantage of the 1991 amendment to Section 331(b) of the Communications Act of 1934. 47 U.S.C. Sec. 331(b). Category two stations are full-time stations (Class "A" and "B") and category three stations are daytime only stations (Class "D"). The improvement factor is the area of interference caused all other stations divided by the station's interference-free service area. The larger the improvement factor, the greater the reduction of interference in the existing band if the station causing the interference migrates to the expanded band.

This Public Notice lists the stations desiring to migrate, their improvement factors and the order in which the Commission will attempt to find an expanded band frequency for the station. Within each of the three categories of stations eligible to migrate to the expanded band, the Commission has ordered the stations according to the improvement factor. Stations ranked from 1 to 4 are in category one, stations ranked from 5 to 332 are in category two and stations ranked from 333 to 688 are in category three. In accordance with footnote 50 of the R&O, daytime stations which have an improvement factor of zero (0.0), are not eligible to migrate to the expanded band. If a daytime station was included on the list issued on August 15, 1993, but does not appear on this list, it is because its improvement factor was calculated to be zero. These stations are being

informed by separate letter that they are not eligible to migrate to the expanded band.

The next public notice will appear when the allotment plan has been developed. The plan is generated by a computer algorithm which is expected to run continuously for several months. Once a solution is achieved, all participants will be notified of the results individually and a public notice listing the allotments will be released.

For more information, contact Jim Burtle at (202) 632-7010.
